EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

At p. 3, line 2 of [0002], change "group III-IV" to -- group III-V --.

At [0006], line 8, change "special test substrate" to --a special test substrate or substrates--.

Allowable Subject Matter

2. Claims 1-20 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art does not disclose applicant's non-destructive and non-contact method for detecting current leakage of a film on a substrate, particularly characterized by steps of irradiating the film with an electron beam, counting detected emitted x-rays caused by irradiating with the electron beam, and determining leakage current from a trend of x-ray count rate.

Applicant's method is advantageous for detecting current leakage of a gate insulating film in a production transistor, for example, because the electron beam can be targeted at production films without damaging them while determining current leakage from a trend of x-ray count rate from a spectrometer of a type used for determining elemental composition of a film [0027]-[0028].

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ceschia et al. (IEEE 2000) is cited for disclosing a study of how electron and x-ray irradiation of an insulating film could affect current leakage, but does not suggest "determining current leakage from a trend of x-ray count," for example.
